Defining Core Mechanics

Inventory Tracker-

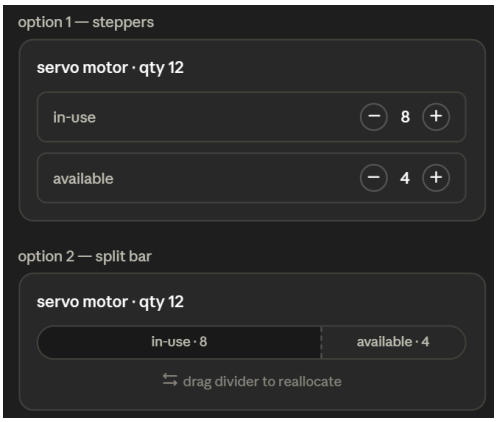

1. **What data/attributes should be shown?**

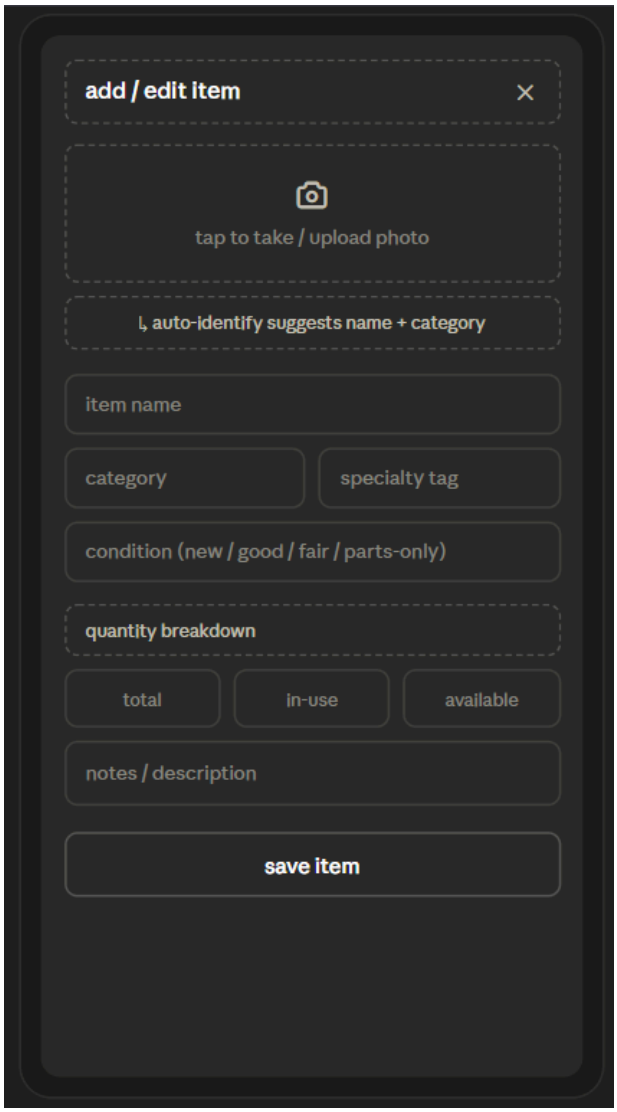

- Name
- Quantity
- Status (in-use, avbl., pending, hold down)
- Category/Specialty tag
- Condition/age of item

2. **What screen features should there be?**

- Filter sort by status/category
- Search by name
- Putting items up for sale (swipe right)
- Adding to inventory
- Quickly editing status

3. **Quickly editing status (tap)**

Adding/Editing an Item-

1. **What are the required fields?**

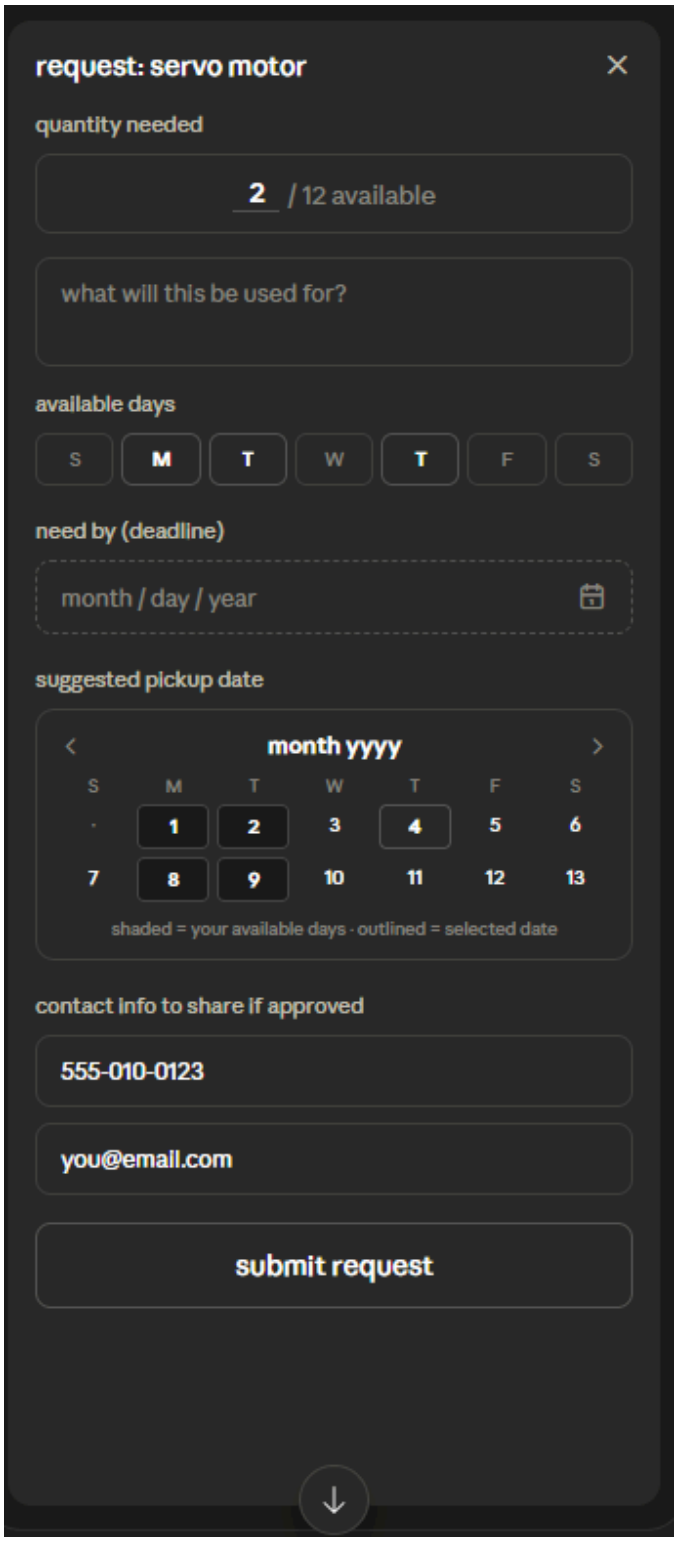

- Item name
- Condition
- Total

2. **API's for auto-identification?**

- Google Cloud Vision API
- Google Gemini API (vision)
- Clarifai (also has a free tier)

3. **What are the available tags?**

- Roboboat
- Robotics (FRC)
- Solar Car
- MARS

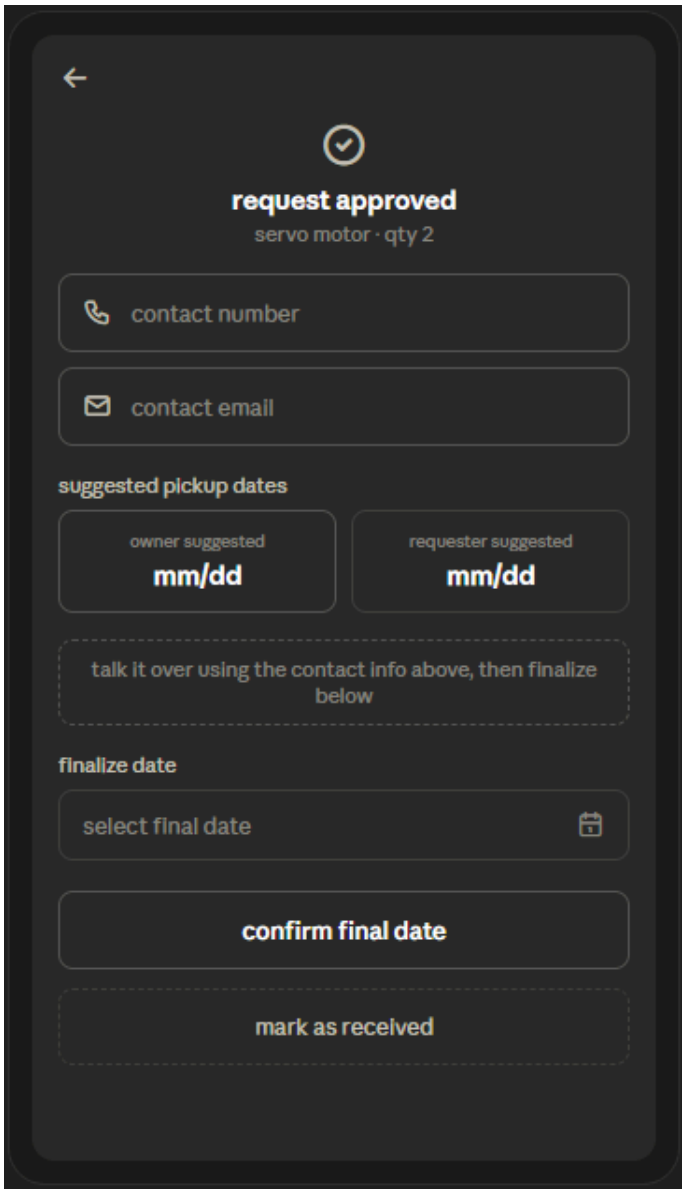

Requesting an Item-

1. **Required fields?**

Quantity, availability, need by, suggested pick up date, contact info

2. **Features?**

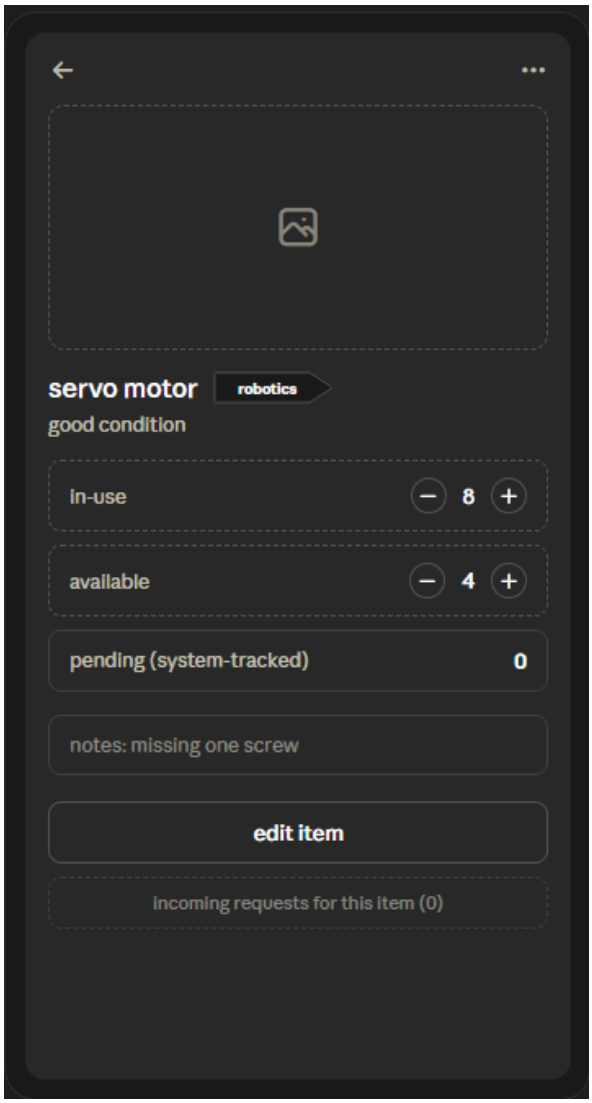

- Suggested fill in for available days after multiple purchases resulting in the same days
- Syncing with google calendar?
- Auto sharing address if it's a school or administrative account?

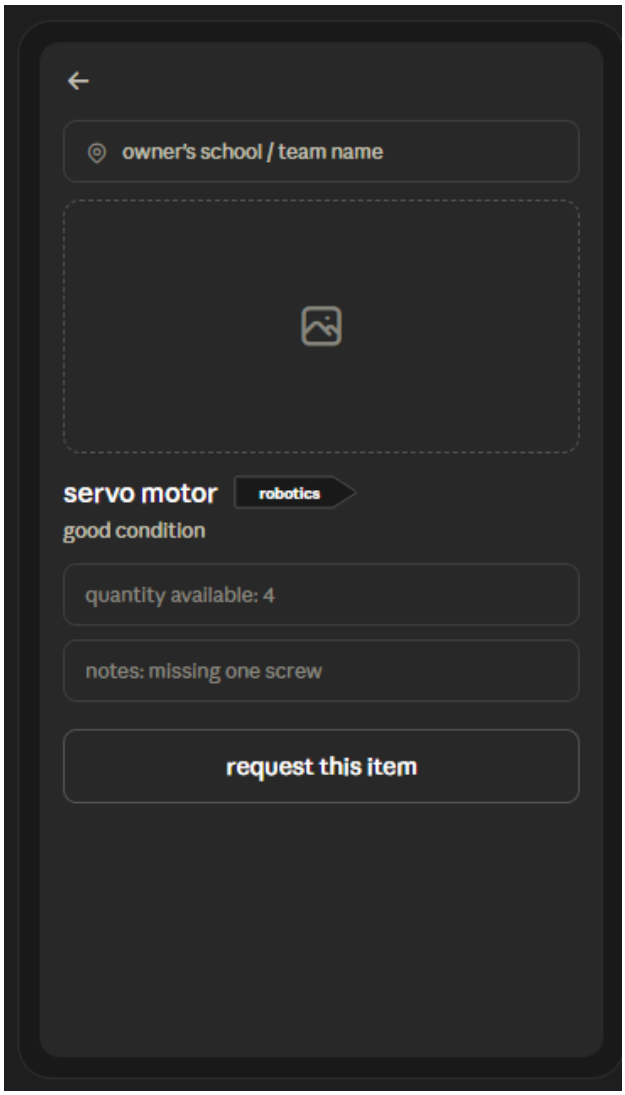

Request Approval Screen-

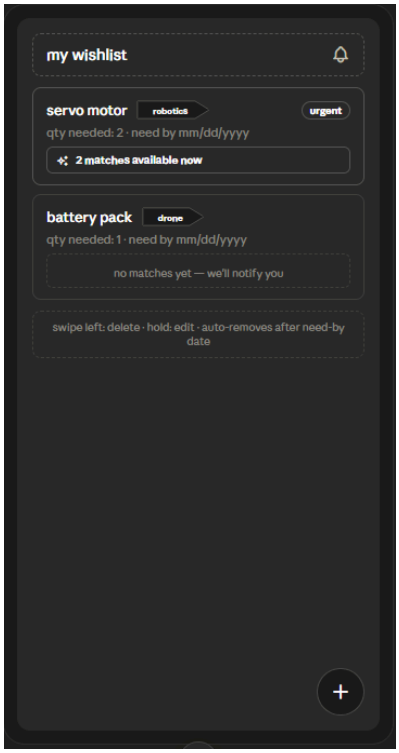

1. **Little questions**
    - How can people go back and track their requests?
    - How can people go and finalize dates?

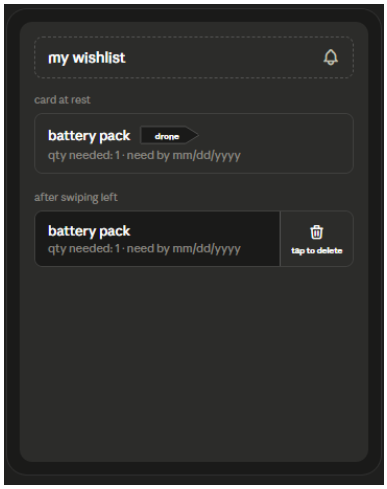

Item Detail Screen- (onlooker on the left, owner on the right)

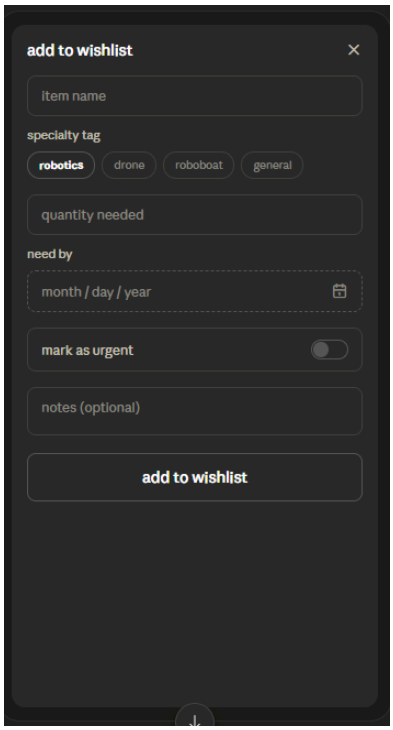

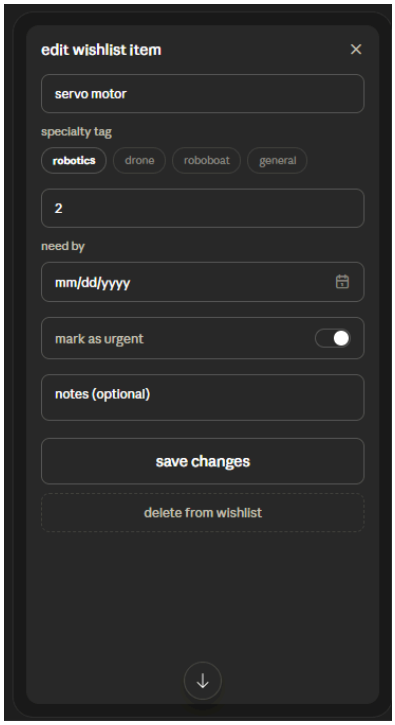

Wishlist Things-

Wishlist Functions

1. Suggests better stuff to community feed
2. Swipe left to delete
3. Optional thing
4. Can make as many wishlists as you want

Browse Community-

- Tiktok like feed
- Tap image to see full item request screen
- Save saves to a different folder
- Influenced by location proximity, wishlist, and specialty tags that ur involved in often
